Product: Light Weight Water Finish Ejectors

Description: The amount of the TSS on light weight water finishes is very minimal. This along with OEM design ejectors causes premature wear and transfer issues. XLE has addressed these concerns by designing ejectors with minimal clearance between the ejector ID & the OD of the spindle, machine a sharp square corner on the ID and hard anodize for excellent wear properties. These ejectors can be designed for any series machine.

Offering: Please provide a sample of existing parts for our engineering requirements.
